

## Removing Links from Images in Wordpress

When you upload an image and add it to a post the system will generally create a link – automatically – to the full sized picture. This makes the thumbnail clickable – your users can click on the smaller image in your post and the full size image will open. Sometimes this is not a desirable effect. The following three screenshots illustrate how to easily remove this link:

In post editing mode, click on the image to bring up the 2 easy edit icons. Click on “Edit Images” to open a new dialog box.

Cornell Cooperative Extension of Herkimer County is located in the heart of the Mohawk Valley and extends into the Adirondacks. Herkimer County is home to approximately 65,000 residents, and is made up of nine communities that share a single vision: to maintain a high quality of life for the county's citizens and visitors. We are proud to be a part of that vision as our vision statement is "*Building Strong and Vibrant New York Counties*"

**Click to open the "Edit Image" options.**

- 120%
- 110%
- 100%
- 90%
- 80%
- 70%
- 60%

Remove this link, and the image will no longer be "clickable" - no blue highlight box.

Alignment  None

Edit Image Title

Edit Image Caption

Link URL

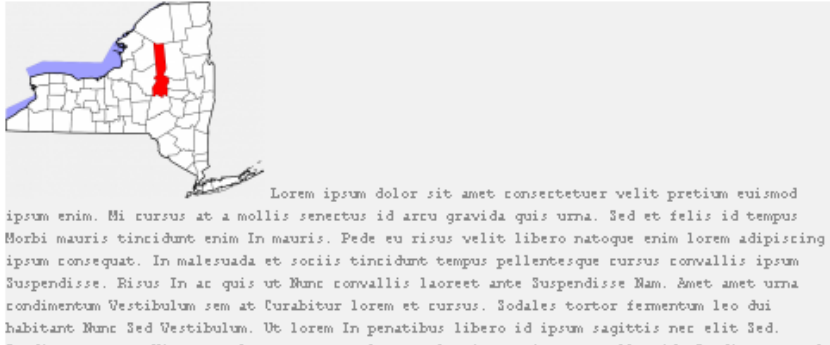

Enter a link URL or click above for presets.

You'll notice a hyperlink in the "Link URL" text box. We need to remove this to clear the link.

Edit Image Title

Edit Image Caption

Link URL

Enter a link URL or click above for presets.

**Link cleared. You can do this by clicking the "None" button, or manually highlighting and deleting the link text.**

**Click "Update" to save the changes.**

You can either click the “None” button just beneath the “Link URL” dialog box, or manually select the link text and delete it.

Once the link is cleared click the “Update” button and you will be returned to post editing mode.
